

# NANU BANSHIVAL

XXXXXX, Bharatpur, Rajasthan 321001 | 8X0931XXXXX | nanubanshival@gmail.com | [linkedin](#) | [Github](#)

## SUMMARY

Software engineer with hands-on experience developing, integrating, and troubleshooting data-driven applications built on ASP.NET Core, C#, and SQL Server. Experienced in REST/JSON API design and documentation (Swagger, Postman), cross-system data integration (ERP/CRM), and resolving production issues on a live multi-tenant platform. Comfortable working directly with stakeholders to diagnose and close out escalated technical issues under delivery pressure.

## SKILLS

**Languages:** C#, SQL, JavaScript, Python, Java, HTML, CSS

**API & Integration:** REST, JSON, API documentation & testing (Swagger, Postman), Web Services, idempotent sync/integration endpoints, Microsoft Graph API

**Frameworks:** ASP.NET Core MVC, Web API, Angular 17, EF Core, Dapper, Razor

**Auth & Security:** ASP.NET Core Identity, JWT, RBAC, Session Auth

**Enterprise Systems:** ERP (Tally) integration, MS Dynamics 365 CRM, WMS, OFS, POS

**Databases:** SQL Server (SSMS), MySQL (dbForge), query optimization, troubleshooting data discrepancies

**Tools & CI/CD:** Azure DevOps, Git, GitHub, Visual Studio, production debugging & root-cause analysis

## EXPERIENCE

**Software Engineer** — DBLB Tech Gurugram, *Haryana (Remote)* | *March 2026 – Present*

- Led major aspects of development on TicketDesk, a service-desk and AMC platform (ASP.NET Core 8, EF Core, SQL Server) — 100+ commits over 3 months, deployed continuously via Azure DevOps CI/CD.
- Built and documented a Tally ERP integration API with idempotent sync endpoints for products, customers, and contracts, resolving recurring data-mismatch escalations caused by manual double-entry between ERP and platform.
- Delivered a JWT-secured mobile REST API (17 endpoints) for field agents, covering serial validation, ticket lifecycle actions, device enrollment, and attachment verification — documented and tested via Swagger and Postman.
- Diagnosed and resolved production regressions during a full framework migration, including a silent camelCase serialization break — root-caused under live business constraints with no downtime to existing consumers.
- Moved outbound notifications from SMTP to the Microsoft Graph API, extending the notification layer with per-event emails, in-app alerts, and watcher fan-out across 6 delivery paths to reduce missed-update escalations.
- Designed the warehouse shipment → sales invoice workflow for a multi-tenant POS/ERP system on the Angular 17 frontend — closing a production bug that allowed over-invoicing on already-shipped orders, identified via customer-reported discrepancy.
- Optimized invoice-load performance by parallelizing data fetches and removing redundant queries, cutting a 3-round-trip load to about 1 — directly addressing a client-reported performance complaint.
- Embedded TicketDesk into a live multi-tenant POS/ERP as a tenant-scoped add-on using a two-DbContext architecture — extended the Angular 17 frontend for seamless in-app ticket management while preserving all existing POS/CRM contracts for active tenants.
- Migrated a Warehouse Management System from .NET Framework 4.8 to .NET 10 across 5 projects (MVC/Web API, integration API, scheduler, Windows service, logging library), preserving all business logic and API contracts.

**Software Engineer Intern** — DBLB Tech Gurugram, *Haryana (Remote)* | *Dec 2025 – March 2026*

- Gained hands-on experience working with and understanding enterprise business systems including Microsoft Dynamics 365 CRM, Tally ERP, WMS, OFS, and POS.
- Developed an understanding of CRM, ERP, warehouse, order fulfillment, and retail/POS workflows and how they interact with custom business applications.
- Worked with enterprise data flows, APIs, business processes, and system interactions across these platforms.

**Instructor, Computer Science** — Poddar College of Technology and Management *Bharatpur, Rajasthan* | *Dec 2025 – Apr 2026*

- Taught Computer Fundamentals & Office Management Tools, Software Engineering, and Data Communication & Computer Networks (DCCN) to ~90 BCA students across three semesters.
- Built lesson plans and classroom content covering software development life cycle, networking fundamentals, number systems, internet basics, and MS Office tools.

## PROJECTS

**Vendor Onboarding System** — ASP.NET Core MVC, EF Core, SQL Server | *Apr 2026 – May 2026*

- Built an 8-step vendor registration workflow with field-level validation, conditional logic, and a two-level approval process (Admin → Super Admin) with an edit-request system for correction cycles.
- Built a document management module (PAN, GST, Aadhar, bank uploads), a self-service portal with real-time status tracking, and SMTP email notifications with dual invitation flows (email + shareable QR/link).

**EduAdmin — School Management System** — ASP.NET Core MVC, EF Core, SQL Server | *Dec 2025 – Feb 2026*

- Built role-based access control (Admin/Teacher/Student) with ASP.NET Core Identity, session-based auth, and a 30-minute idle timeout.
- Built a bulk daily attendance module with per-date upsert logic and a leave management workflow with approval tracking and automatic balance deduction.

## EDUCATION

**B.Tech, Computer Science & Engineering** — Govt. Engineering College, RTU Kota

Oct 2021 – Jun 2025 | CGPA: 7.18/10 | Qualified GATE 2026 (Computer Science & IT)
